

## Why action is necessary?

Excessive proliferation of bacteria and fungi on the skin could cause pruritis and leads to many pathological changes resulting in:

- + Excessive scratching.
- + Biting the fur.
- + Damage of epidermis.
- + Wounds.
- + Disorders in the secretion of sebum.
- + Dandruff.

The use of shampoos containing antifungal and antibacterial substances will limit number of microorganisms on the skin surface and:

- + Supports the therapeutic process and restores proper function of the skin.
- + Facilitates the removal of exfoliated epidermis.
- + Regulates the secretion of sebum.
- + Helps to remove broken hair remnants.
- + Protects from recurrence of the problem.

All **VetExpert** products are produced in factories with the GMP (Good Manufacturing Practice) standard. This is the **highest quality standard** in pharmacy.

The compositions are developed in cooperation **with veterinarians and researchers.**

**Specialist Shampoo**, like all VetExpert products, is recommended and sold through veterinary surgeons.

Specialist Shampoo is a top quality product at an **affordable price.**

CATS & DOGS

## SPECIALIST SHAMPOO

### Dermocosmetic shampoo

for skin prone to recurrent infections in dogs and cats

## What's the **problem?**

Dermatological disorders caused by bacterial or fungal infections are frequently caused by impaired immune system in the animals body.

In majority of cases the skin infections are caused by microorganisms being a part of normal microflora of animal skin, so the treatment of patient is not focused on complete elimination of bacteria or fungi.

## Examples of clinical cases

$C_{22}H_{30}Cl_2N_{10}$

$C_{26}H_{28}Cl_2N_4O_4$

VetExpert **Specialist Shampoo** is a **dermocosmetic shampoo for dogs and cats** prone to skin disorders related with recurrent bacterial or fungal infections.

**It could also be used as a supportive tool for treatment of skin disorders** caused by inflammations.

It cleanses the skin and maintains proper pH.

**Chlorhexidine** has **excellent antiseptic properties** and shows **high effectiveness in eliminating the majority of bacterial and yeast infections** of dog skin. It is not absorbed into the body and remains on the skin.

**Ketoconazole** is a broad-spectrum **antifungal agent, including dermatophytes, yeasts and polymorphic fungi**. It reduces pruritus and decreases the severity of skin lesions associated with skin inflammation.

## Usage

- 1 Make a foam and massage for 5 minutes.
- 2 Protect the eyes and ears of the dog from being penetrated by shampoo.
- 3 Rinse thoroughly.
